

### How to Use AOBA (1st step)

### スパコンAOBA利用の第一歩

**Cyberscience Center, Tohoku Univ** 

Hiroyuki Takizawa <a href="mailto:kizawa@tohoku.ac.jp">takizawa@tohoku.ac.jp</a>

## **High Performance Computing**

- This course will provide an opportunity to use the AOBA supercomputer.
  - Assuming that students already have the basic knowledge about ...
    - Use of basic Linux commands
    - C/C++ programming

These background knowledge topics will not be explained during the lecture and should be acquired beforehand through self-study.

It would also be better to be familiar with the software tools such as ...

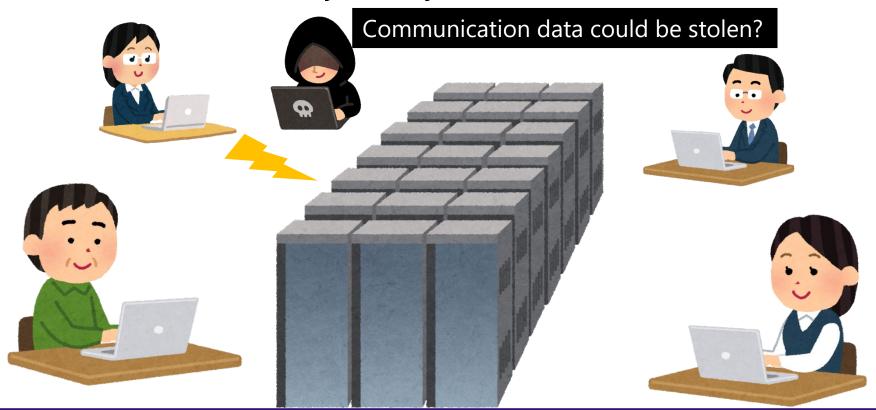

#### Visual Studio Code with Remote Development extension

https://code.visualstudio.com/docs/remote/remote-overview

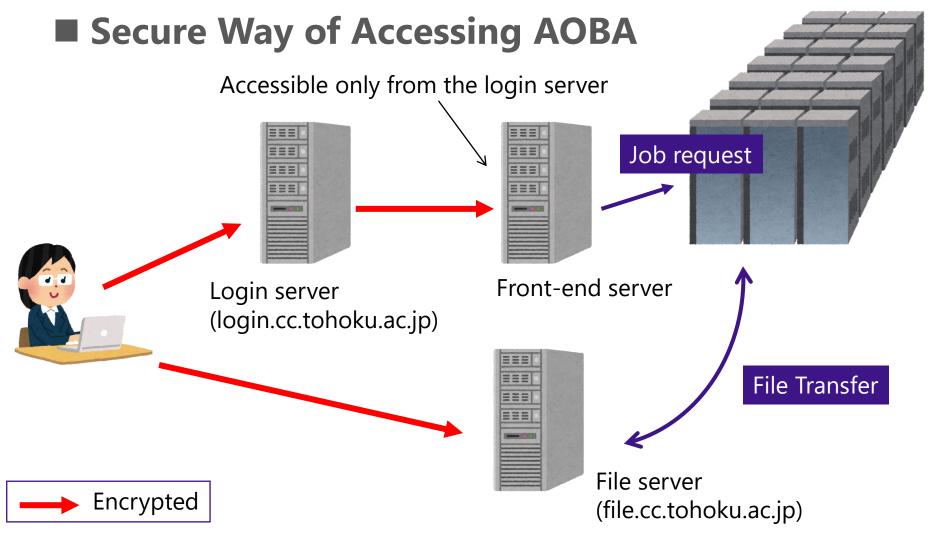

# Login to Supercomputer

- **■** Supercomputer = Shared Resource
  - Shared by many users
  - Used remotely from your PC via the Internet

# **System Configuration**

## Secure Shell (SSH)

# ■ Communication Protcols for encrypted communication

 A number of user authentication mechanisms are available to check if a right person is going to access the remote computer.

#### **■** Public Key Infrastructure (PKI)

• A pair of a **public key** and a **private key** is used for user authentication.

#### **■** There are many SSH clients

- Windows Subsystem for Linux (WSL)
- Windows Powershell
- MacOS

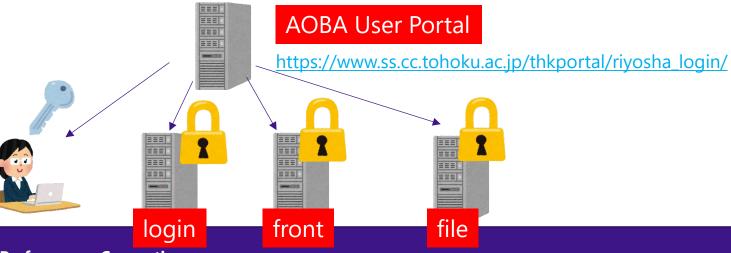

### **AOBA User Portal**

■ Create a pair of one private key and its correspongind public key

A private key is used to prove your identity. You must always keep it secret, and never put it on the Internet. You must store it only on your own PC.

A public key is actually something like a key hole. In the case of AOBA, it is automatically put onto login, front, and file servers.

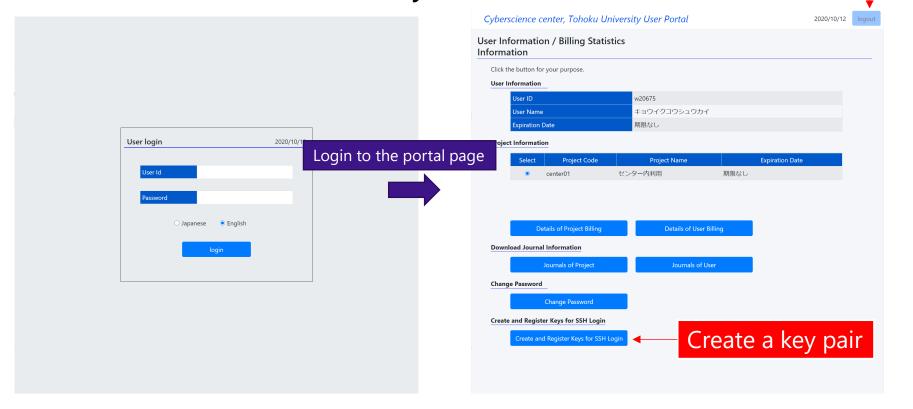

# Login to AOBA Portal

#### You need User Id and Initial Password

 The initial password is used to login to the portal site and to create keys.

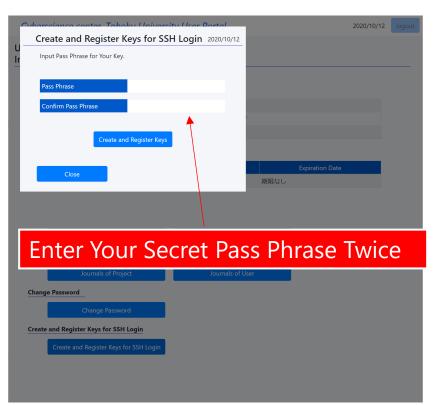

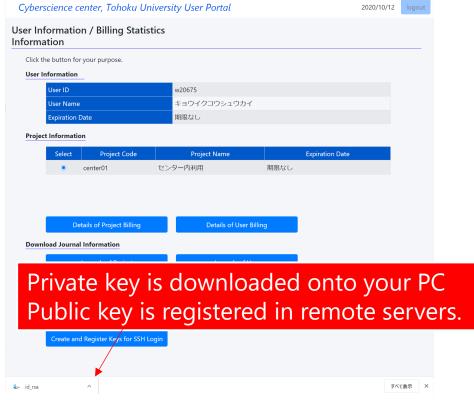

Logout

# **Create a Key Pair**

### Set a Passphrase for your private key

• Even if your private key is stolen, it still needs the passphrase for user authentication.

# Set up your Windows PC

- Move the private key (Don't copy) to ...
  - Create a folder C:\(\frac{4}{2}\)Users\(\frac{4}{2}\) [Name]\(\frac{4}{2}\).ssh
  - Here, [Name] is probably your name on your PC.
- Create a text file "config" in the same folder (be sure no file extention)

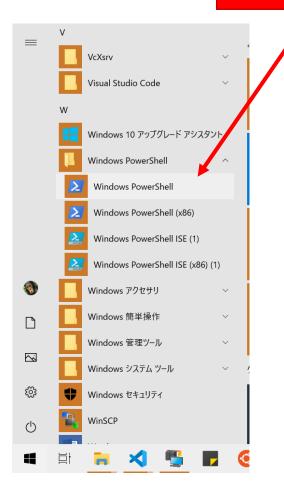

```
# For login server
Host login
HostName login.cc.tohoku.ac.jp
                                 # host name
User [User Id]
                                 # User Id at portal
IdentityFile ~/.ssh/id rsa
                                 # private key file
# For front server
Host front
HostName front.cc.tohoku.ac.jp
                                 # host name
                                 # User Id at portal
User [User Id]
ProxyCommand ssh -CW %h:%p login # access front via login
IdentityFile ~/.ssh/id rsa
# For file server
Host file
HostName file.cc.tohoku.ac.jp
                                 # host name
                                 # User Id at portal
User [User Id]
IdentityFile ~/.ssh/id rsa
                                 # private key file
```

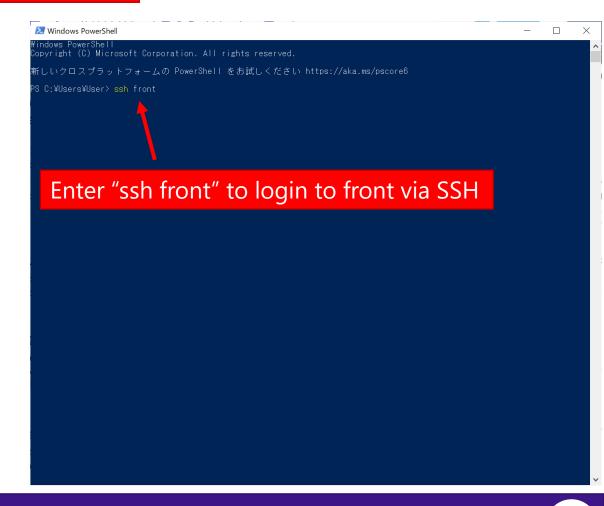

9

### Windows PowerShell

#### Windows PowerShell

### **FAQ**

■ If you got the following message,

```
CreateProcessW failed error:2
posix_spawn: No such file or directory
```

then, first find the ssh.exe on your system.

```
# For front server
Host front
HostName front.cc.tohoku.ac.jp
User [User Id]
ProxyCommand C:\frac{1}{2}WINDOWS\frac{1}{2}YOPENSSH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}{2}SH\frac{1}SH
```
